DEPEND ON THE EXPERTS

STANDBY POWER

FULL SERVICE SOLUTIONS

A Commitment to Service Excellence

Ensuring that emergency standby generator systems are ready when needed is of vital importance. Standby generator systems provide life safety, protect major assets, and mitigate business losses. We understand the pressure placed on facility managers responsible for making sure their generator sets are ready and performing in times of crisis and we stand ready to help.

At Power Station we are your generator set professionals. We have the expertise, experience, know-how and commitment to provide you with an unparalleled level of service in an industry unfortunately known for inconsistent customer service.

Our core values of open communication, hard work and integrity have allowed us to grow from our beginnings in 1996 with a handful of customers to our present position of servicing approximately 1000 standby systems across Ontario.

Our client list includes many of Canada's largest telecom, healthcare and commercial facilities. We are proud to say that no competitors can rival us on our level of service and expertise. Our customers call it the Power Station advantage.

Full Service Solutions

At Power Station we offer flexible, specially tailored scheduled maintenance programs and fast emergency service response. Our maintenance programs meet or exceed CSA standards and Ontario Fire Codes.

From older mechanical relay based systems, to modern highly sophisticated computerized PLC based installations, you get the full benefit of our fully trained, experienced and professional team. We provide accurate estimates, firm quotes and detailed work statements. We understand your facilities, document all we do, and importantly, communicate it all back to your key staff. We work 24/7 - 365 as required, and no job is too small, large or technically involved for us.

Fire Pumps. Fire codes require regular servicing and maintenance of fire pumps to ensure their readiness in times of emergency. We maintain and service all makes and types of building fire pumps to standards that meet or exceed manufacturers' fire code standards and requirements.
